START YOUR RAILROAD *Journey*

Model Railroading is an exciting, fun-filled family activity that can build a bridge across any generation gap. As you've already read, it brings many different elements to mind for those who participate in this century old hobby. But how does one get started?

Just like creating a layout requires a plan, so does participating in the hobby of model railroading. You need a roadmap to understand how you get started & where you can end up.

Along the way, you'll experience all the benefits of the hobby while creating memories & experiences that last a lifetime.

1 Start with a locomotive

In order to run a train or build a collection, you've got to have an engine & M.T.H. locomotives are the best value in model railroading.

No other manufacturer comes close to delivering the quality & features found in every M.T.H. engine, regardless of product line or price.

4 Expand your empire

M.T.H. has long recognized that model railroads can be sophisticated centers of operation. That's why all of our products can be controlled remotely with our easy-to-use Digital Command System. It's the only system that boasts compatibility with other command control products bringing 21st Century Technology to America's oldest electronic hobby.

2 Create your layout

Because M.T.H. products run so well, leaving them on a shelf or in their boxes just won't do. You need to run them & M.T.H. has all the supplies you need to start building your layout.

Three different track systems & a huge selection of trackside accessories including operating signals are just pages away.

3 Automate your layout

Whether your model railroad is complete or not, you'll always be tinkering with it. That's why we've created the largest line of operating accessories, buildings & add-on passenger & freight cars you can choose from today.

M.T.H. LOCOMOTIVES LEAD THE PACK

Compare an M.T.H. locomotive & you'll find a wealth of features unmatched by others. It all starts with the inclusion of digital sound in virtually every type of locomotive we produce.

Simple locomotive sound effects including engine, bell & horn effects come with every Loco-Sound equipped engine. For just a few dollars more, incredibly sophisticated but easy-to-use cd quality sounds are included in all Proto-Sound 2.0 locomotives as well as remote control operating couplers that can be activated at any time without additional equipment.

All Loco-Sound & Proto-Sound 2.0 equipped locomotives feature Locomotive Speed Control, the patented speed control system that allows a locomotive to maintain a desired speed regardless of terrain changes. Enter a curve, climb a grade or coast down an incline at the same speed without ever touching the throttle.

Each of these conventional features have been included in M.T.H. locomotives for the past three years & aren't found throughout any other manufacturer's entire locomotive roster. In fact, these features usually aren't found at all or simply fail to match the quality of M.T.H.

Demand Proto-Sound® 2.0 in your next locomotive

Proto-Sound 2.0 makes the most technologically advanced locomotives on the market.

Locomotives equipped with this sound & train control system offer tremendous expandability. They offer more features out of the box than any other engines, & when paired with the DCS Digital Command System they offer features other manufacturers cannot begin to compete with. Proto-Sound 2.0 is perfect for people who love technology & how it multiplies their fun.

Right out of the box, Proto-Sound® 2.0 engines deliver:

- Horn, Bell and Locomotive Digital Sound Effects
- Sound Effects, Including Passenger Station or Freight Yard Sounds & Cab Chatter
- Speed Control Equipped to Eliminate Throttle Adjustments
- Exclusive Synchronized Steam Engine Puffing Smoke
- Operating Couplers to Release Cars on the Fly
- Wide Range of State-of-the-Art Digital Sounds
- Adds Hundreds of Additional Features when operated with DCS

Upgrade other locomotives to Proto-Sound® 2.0

Proto-Sound 2.0 upgrade kit provides:

- **Patented Proto Speed Control** - run locomotives at constant speeds up & down grades, through curves with & without loads
- **Patented Proto-Coupler Operation** - uncouple your train at any time in conventional or command mode
- **Patented Synchronized Puffing Proto Smoke** - puffing smoke & chuffing steam sounds timed to driver revolutions
- **Patented Proto-Sounds 2.0 Digital Sound & Control Effects** - command control features & CD sound quality
- **Patented Software Upgradeable Design** - enhance locomotives with new features or sounds as they are created

Performance Service Plan

All M.T.H. powered locomotives in the 2004 product line can now be purchased with an optional three-year M.T.H. Performance Service Plan (PSP) available either directly from M.T.H. or through your local M.T.H. Authorized Retailer. Each PSP ensures that you will receive added warranty protection beyond the normal M.T.H. one-year limited warranty. The PSPs are renewable and transferrable so the protection goes with your train, even if you sell it.

PSP Benefits:

- Parts & Labor On Proto-Sound 2.0 Electronics* Is Fully Covered
- No Deductibles Or Out-of-Pocket Expenses**
- Free Return Shipping
- Renewable
- Transferable

* Batteries, lights, pickup rollers are not included.

** Reimbursement of return shipping to factory is not included.

PSPs can be ordered online at www.mthtrains.com within 30 days of the date of purchase of a 2004 M.T.H. locomotive. PSPs can also be ordered from any M.T.H. Authorized Retailer, again within 30 days of purchase of a 2004 M.T.H. locomotive. Locomotives must be purchased from an M.T.H. Authorized Retailer and a copy of the sales receipt must be provided before the PSP will be issued.

Welcome Aboard!

Experience the exciting products M.T.H. has to offer this year!

M.T.H. Electric Trains proudly develops today's most popular and innovative locomotives, rolling stock, accessories and command control operating systems. Since 1992, only M.T.H. has consistently delivered what you desire in model railroad products by producing over 7,200 different items. You'll find them in O, Standard and Large Gauge sizes in enough variety to please the most discriminating enthusiast.

locomotive speed control system, locomotive remote uncoupling system, synchronized puffing smoke and the excitement of Proto-Sound 2.0 and DCS are unmatched by others in the industry. Although advanced, every M.T.H. product is easy to use, easy to setup, and fun to operate. More importantly, all conventional features found in M.T.H. products can be accessed with a simple transformer equipped with only a bell and a whistle button.

With each subsequent production, lessons learned from previous products are applied to new items ensuring that M.T.H. products continually evolve and improve. By intertwining technology into M.T.H. models, consumers can now own the most realistic operating locomotives available today in every level of the M.T.H. product line. Patented M.T.H. features like our

Over the next 177 pages, you'll find all of M.T.H.'s 2004 O Gauge product offerings. Choose from inexpensive RailKing Proto-Sound 2.0 locomotives, rolling stock and passenger offerings as well as the sophistication and detail found in the 1:48th O Scale M.T.H. Premier Line.

RailKing® is M.T.H.'s most popular line of trains and accessories featuring a full line of high quality, traditionally sized models including locomotives, freight & passenger cars, track, accessories and electronics. Model rail-roaders who prefer to run their trains rather than collect and display them often find RailKing an attractive and affordable option.

Like our Premier offerings, RailKing locomotives are powerful and solidly built for years of operating enjoyment. Each locomotive features all metal wheels, gears & axles, flywheel equipped motors for smooth starts & stops, and state-of-the-art electronics for incredibly realistic operation. Many diesel locomotives are also available in non-powered versions for realistic double-heading.

RailKing Locomotives - Unmatched Features

- Patented Proto-Sound® 2.0 Digital Sound and Train Control

Sponge Bob 0-4-0 Train Set

Deep down in the ocean lives a square yellow sea sponge with a penchant for stalking wild jellyfish (as there is nothing like a great tasting PB&J sandwich made from jelly straight from the source). Sponge Bob - as our little yellow friend is known - has a pet snail named Gary, a neighbor and best friend Patrick (from the Starfish family) and a co-worker octopus who hails to Squidward Tentacles. Together, each of these fellows mix and mingle with other characters down below doing all the things that landlubbers do - driving cars - err boats - , going to work and yes riding on trains!

This durable, inexpensive set brings Sponge Bob and all the characters of Bikini Bottom to life on your railroad. Designed for years of fun for the entire family, the Spongebob Express is a great way to start your own model railroading tradition. Amaze your friends and family with the set's smooth operation & plumes of smoke from the working smoke stack. Then blow 'em away when you press the whistle button and the train plays the Sponge Bob theme song!

Nothing

says New York City like its world famous subway system. The precursor to mass transit the world over, the New York subway system moves millions every week and often celebrates the city's accomplishments along the way. M.T.H. has created two subway sets that scream 'New York' in the bright colors of the NY Yankees™ and NY Mets™.

Baseball fans of either team will find these 2-car ready-to-run train sets a must-have for their memorabilia collections. Pulled by one powered car, each set features the incredible sounds of Proto-Sound 2.0 including unique station stops familiar to those that rode to Yankee Stadium™ or Shea Stadium™ during the nearly two week Fall Classic®. Imagine the look on your visitor's faces when they hear the subway PA system call out the next stop, the sound of the doors opening and passengers spilling out in the station.

Caterpillar F-3 Train Set

Put your railroad to work with this bright yellow Caterpillar Ready-To-Run diesel freight set. Bearing the markings of one of America's most famous companies, this set makes a great beginning for any family's first model train.

The F-3 diesel's striking black & yellow paint scheme houses a powerful 2-motored chassis. Outfitted with all-metal wheels and gears, the engine runs as good as it looks and comes equipped with digital sound and revolutionary speed control features found only in

RailKing Ready-to-Run train sets. You'll be amazed at the sounds you hear when the engine is first fired up. Listen for the sound of Caterpillar tractors being loaded and unloaded and hear the yard master barking out instructions to the engineer! Each sound is easy to activate using the Z-1000 transformer and brings a whole new dimension of excitement to model railroading.

Pennsylvania 2-8-0 Freight Train Set

A classic freight set is a great way to start your family's model railroading tradition and the Pennsylvania 2-8-0 Consolidation freight set makes a great beginning. Decorated in near black Pennsylvania Brunswick Green colors, this creative adaptation of the 2-8-0 features an all metal steam engine boiler and chassis that feels as strong as it runs. The all-metal gears, wheels and axles will ensure a lifetime of fun. Trailing behind the puffing locomotive are three freight cars with sprung die-cast metal trucks and operating metal couplers. As with all RailKing Ready-to-Run sets, the 12 piece RealTrax oval assembles in minutes and can be placed right on the carpet for a quick, temporary layout.

Locomotive Features

- Die-Cast Boiler and Chassis
- Flywheel Equipped Motor
- Locomotive Speed Control
- Electronic Reverse Unit
- Operating Metal Coupler
- Operating Headlight
- Synchronized Puffing Proto-Smoke Unit
- All-Metal Wheels and Gears
- Your Choice of Loco-Sound® or Proto-Sound® 2.0 with Chuffing Steam, Whistle and Bell Sounds
- Locomotive Measures: 19 1/4" x 2 1/2" x 3 3/4"

Pennsylvania 2-8-0 Passenger Train Set

For decades, the Pennsylvania Railroad was America's largest railroad stretching from the East Coast to the Mid-West moving untold amounts of freight and thousands of passengers every day. Although long gone, the spirit of the Pennsylvania is as strong today as it was in its heyday. Featuring a near-scale locomotive, the Pennsy Keystone 2-8-0 ready-to-run passenger train set comes decorated in classic Pennsylvania livery and features a heavy 2-8-0 steam locomotive with all-metal gears, wheels and axles to ensure a lifetime of fun.

The unique sounds of Proto-Sound 2.0 will amaze your friends and family. Imagine their faces when the whistle wails or the exclusive Passenger Station Proto-Effects begin calling out the next station stop on the line - just like the real stations! Of course, seeing the synchronized puffing locomotive pull its three car passenger consist with die-cast metal trucks and operating metal couplers is even more impressive and tells all who see it that this is one great set. As with all RailKing Ready-to-Run sets, the 12-piece RealTrax oval assembles in minutes and can be placed right on the carpet for a quick, temporary layout.

- Locomotive Measures: 19 1/4" x 2 1/2" x 3 3/4"

The 2-8-0 steam engines was first developed in 1864-1865 to provide power for heavy trains, at a moderate speed, especially on steep grades. Alexander Mitchell, the chief mechanic for the Lehigh and Maloney Railroad, an eastern Pennsylvania coal hauler, designed the original 2-8-0. The Pennsylvania Railroad (PRR) was the first to put the 2-8-0 type engine on the rails when they rebuilt a Baldwin flexible-beam engine to a 2-8-0 configuration. For more than forty years, the 2-8-0 Consolidation was America's standard freight locomotive, working hard on virtually every railroad.

Imagine the faces of your friends and family when you fire up the locomotive and they hear for the first time the incredible digital sounds of the Proto-Sound® 2.0 system. Deep chuffs timed to the driver revolution and the smoke stack's puffs bring the engine to life in a way no other manufacturer's train set can. As with all RailKing Ready-to-Run sets, the 12-piece RealTrax oval assembles in minutes and can be placed right on the carpet for a quick, temporary layout.

If you are starting a journey into model railroading for the first time, only high-quality RailKing Ready-to-Run train sets can deliver the performance and expandability that will ensure many happy years of railroading fun. Outfitted with durable, long-lasting locomotives and equipped with all-metal parts and incredible operating features, these sets are unmatched in value from any other O Gauge ready-to-run train set.

You'll find big heavy engines, lots of operating features and full sized O Gauge cars, not dinky little models found in some O Gauge sets. Imagine the faces of your friends and family when you fire up the locomotive and they see and hear this incredible locomotive in action. Synchronized chuffs timed to the driver revolution and the smoke stack's puffs bring the engine to life in a way no other manufacturer's train set can. As with all RailKing Ready-to-Run sets, the 12-piece RealTrax oval assembles in minutes and can be placed right on the carpet for a quick, temporary layout.

The Holiday season and model trains have always gone together. What better way to recreate this classic memory than to include a beautifully decorated set around your Holiday tree. Featuring bright, Holiday colors the Christmas 2-8-0 freight set captures the spirit and fun of model railroading in an affordable train set that will last for years and years.

Equipped with a heavy die-cast locomotive and three durable freight cars, we've also included a cassette player and holiday tape featuring classic holiday songs. Plug the tape player into the infrared lockon, press play and you'll hear those Holiday classics playing right through the train as it circles your tree or holiday garden. It is sure to create warm Holiday memories for all who see it run!

Alaska 0-4-0 Freight Train Set

Dockside switch engines were used to move cars around a dock or pier during the late nineteenth and early twentieth centuries. They featured a built-in coal bunker behind the cab rather than a trailing coal tender. This configuration made the small engines ideal for fitting into tight spaces and shuttling cars around the docks for loading and unloading cargo, a job larger engines could not have done.

This durable, inexpensive set is the easiest way to start your own model railroading tradition. You'll be amazed at the locomotive's smooth operation, great plumes of smoke from its operating smoke stack and the haunting sounds of its whistle.

Set Features

- Die-Cast Steam Locomotive
- 3-Car Freight Consist
- 31" x 31" 8-Piece RealTrax Circle
- 50-watt Power Supply With Wireless Remote
- Infrared Track Lock-On
- RailWare Interactive CD Rom With Track Layout Software

Amtrak Genesis Passenger Train Set

By the late 1980's, Amtrak was searching for a replacement for its outdated and aging fleet of F40PH and GP-40s. Weary of getting more locomotives that were really designed for freight operation, Amtrak searched for a new, lightweight, high-tech alternative. General Electric provided Amtrak with an answer with its unveiling of the "Genesis." Featuring a monocoque frame, advanced electronics, and special environmental and safety features, the Genesis represented the state-of-the-art in U.S. passenger service.

Today, Amtrak is the most recognizable railroad running on today's rails and this set will be instantly recognized by young and old railfans alike. Set up is quick and easy and the smooth performance of M.T.H.'s speed control make for flawless operation. Diesel engine sounds and bell and horn sounds round out the features to make this set a great value for a family just getting into model railroading.

Texas Special F-3 Freight & Passenger Train Sets

Put your railroad to work with this incredibly powerful Texas Special Ready-To-Run diesel freight set. Featuring the Southwest's most famous railroad locomotive paint schemes, this set makes a great beginning for any family's first model train.

The F-3 diesel's red & white paint scheme houses a powerful 2-motored chassis. Outfitted with all-metal wheels and gears, the engine runs as good as it looks and comes equipped with digital sound and revolutionary speed control features found only in

RailKing Ready-to-Run train sets. Included are three well detailed freight cars, each outfitted with all-metal sprung trucks, operating couplers, wheels and axles ensuring years and years of fun operation. Digital sound effects include squeaking brakes, diesel roar, diesel horn, clanging bell and exclusive Freight Yard Proto-Effects that recreate the sounds and action of a freight yard.

Passenger Cars Feature:

- Intricately Detailed Durable ABS Bodies
- Die-Cast 4-Wheel Trucks

New York Central and ALCO built the Hudson in 1927 to serve as a powerful and fast passenger engine along the railroad's famed "Water Level Route." The Hudson was such an immediate and enormous success that other railroads quickly copied its combination of large drivers and fireboxes to boost their own high-speed passenger service. Other railroads, such as the Santa Fe, which used a Hudson to pull a mail train the 2227 miles from Los Angeles to Chicago without changing engines, also found that the 4-6-4 arrangement made for a fast moving, long hauling engine. The Hudson was an unqualified success, heading up glamorous name passenger trains for railroads across the country.

The RailKing® Hudson, available in the markings of eight popular road-names, will pull your crack passenger trains as smoothly as the prototypes pulled theirs.

Did You Know?

Although NYC gets the credit for the first Hudsons, it was actually the Milwaukee Road's designer C.H. Bilty that designed the first 4-6-4, which he called a "Baltic," in 1925. However, they delayed building the locomotive, and NYC got to claim the success.

4-4-0 General Steam Locomotive

The day is April 21, 1865 and the Civil War has just ended. The country lies in mourning while the slain President Lincoln's coffin leaves Washington, D.C. backtracking almost the exact route he followed to Washington as President when elected four years earlier.

The President's coffin travelled home 9 days after his assassination on April 14, 1865 in a special private car built for him while alive but never used until this sad occasion. The funeral train travelled from Washington to Baltimore and on to Harrisburg, Pennsylvania. It was headed by Pennsylvania Railroad Locomotive 331 and was draped in black.

Lincoln's coffin is moved to the Pennsylvania State House of Representatives to lie in state. 40,000 people lined Harrisburg's streets when the coffin returned to the depot to begin its journey to Philadelphia's Broad Street Station. Public viewings were repeated in Philadelphia before the pattern started over in Jersey City, New York, Cleveland, Columbus and Chicago. The procession eventually arrived in Springfield on May 4th. On each cross over from one railroad to the other the engine was changed and the train made stops at every town along the way to give Americans a chance to pay their last respects.

The 2-8-0 steam engine was first developed in 1864-1865 to provide power for heavy trains running at moderate speeds, especially on steep grades. Alexander Mitchell, the chief mechanic for the Lehigh and Maloney Railroad, an eastern Pennsylvania coal hauler, designed the original 2-8-0. The Pennsylvania Railroad (PRR) was the first to put the 2-8-0 type engine on the rails when they rebuilt a Baldwin flexible-beam engine to a 2-8-0 configuration. For more than forty years, the 2-8-0 Consolidation was America's standard freight locomotive, working hard on virtually every railroad.

Produced in near-scale proportions, the Rugged Rails 2-8-0 steam locomotive may be low-priced but it's still equipped with the same high quality components and features found in more expensive RailKing steam locomotives. Featuring a die-cast metal locomotive boiler and chassis and durable ABS tender, each 2-8-0 is equipped with the state-of-the-art Proto-Sound 2.0 system for an incredible operating experience. No other manufacturer gives you a locomotive with speed control, synchronized puffing smoke, remotely controlled Proto-Couplers or high quality digital sound at this low of a price. You'll be amazed at how slowly and smoothly she runs - up and down grades and around corners with or without a load. And when you see her smoke, with each puff timed to the revolutions of the drivers, you'll know that you've just obtained the best value in model railroading.

* Available on Proto-sound 2.0 models only

The E-8 was one of the most popular of the E-series locomotives built by EMD in the early 1950s. The 6,750 h.p. E-8 A-B-A arrangement was known for pulling passenger trains on most major express routes at speeds up to 100 mph. This streamlined beauty was one of the last locomotives to sport the Bulldog nose look that EMD popularized a decade earlier.

Unfortunately, a drastic decline in demand for passenger service in the '60s led to the abandonment of these fine diesels. During that time, there was a shift to more utilitarian general purpose locomotives, which went on to dominate the railroad landscape for two decades.

Once again the E-8 returns to the RailKing line complete with all the big fun and excitement that this able handler of passenger trains provides. Each AA set is equipped with the awesome sounds and features of Proto-Sound® 2.0 for an operating experience unmatched by other O Gauge manufacturers. Experience realistic slow speed performance as you enter a passenger station thanks to the incredible realism of Proto-Speed control™. Activate the passenger station Proto-Effects™ to simulate the announcing of your train as it arrives. Marvel at the sounds of passengers coming and going. It's model railroading at its most fun.

- Colorful Paint Scheme
- Metal Chassis
- Metal Wheels, Axles and Gears
- Die-Cast Truck Sides, Pilots and Fuel Tank
- (2) Precision Flywheel Equipped Motors
- Intricately Detailed ABS Bodies
- (2) Remotely Controlled Proto-Couplers™
- Directionally Controlled Headlight
- Metal Horn
- Locomotive Speed Control
- Proto-Sound® 2.0 With The Digital Command System
- Featuring:- Passenger Station Proto-Effects™
- Unit Measures: 29 3/4" x 2 1/2" x 3 1/2"
- Operates On O-31 Curves

EMD's 800-hp SW-8s and 1,200-hp SW-9s both debuted in 1950, marking the next stage in the evolution of one of railroading's longest-lived diesel families. The first SW-class engine, the 600-hp SW1, appeared in 1939, and the SW-units remained in the EMD catalog until the 1,000-hp SW-1000 was finally retired in 1986. With the "SW" in the name denoting that the engine was built for switching duties, it never needed the high horsepower ratings of road diesels. They could be paired with cab-less "calf" units in the classic cow and calf configuration if a particular job needed more power.

These boxy little workhorses return to the M.T.H. RailKing® lineup in 2004 in a new variety of roadnames. As with all RailKing diesel engines, each is available with the exciting Proto-Sound® 2.0 system for unprecedented value and fun. As switch locomotives, the SWs are perfect for yard duty thanks to their incredible slow-speed performance - performance governed by M.T.H.'s® industry-leading Proto-Speed speed control™ system. No other switchers can creep so slow or uncouple cars from front or rear without additional equipment. If you've got a transformer with a whistle and bell button, you've got the best switcher you can buy today.

- Unit Measures: 12" x 2 1/2" x 3 1/2"
- Operates On O-31 Curves

Pull-out fact:

While the SW-8s and -9s were produced as replacements for the aging NW-2 diesel switcher, they proved themselves impervious to age, becoming railyard mainstays for decades.

*All Railking non-powered Locomotives feature no electrical components but do include operating mechanical couplers.

Did You Know?
The name PCC comes from **President's Conference Committee**, the group that initiated the car's creation.

Features

- Directionally Controlled Headlights
- Intricately Detailed ABS Body
- Die-Cast Truck Sides
- Authentic Paint Scheme
- Precision Flywheel Equipped Motor
- Lighted Interior
- Illuminated Number Boards
- Lighted Marker Lights
- Metal Wheels, Axles and Gears
- Locomotive Speed Control
- Your choice of Loco-Sound® or Proto-Sound® 2.0 With The Digital Command System
- Featuring: Station Stop Proto-Effects™
- Unit Measures: 11 1/2" x 2 1/2" x 3 3/8"
- Operates On O-27 Curves

In the 1920s, the great rise in the popularity of the automobile prompted a desperate effort to save the dying streetcar industry. The automobile's success dictated that any successful modern streetcar be designed both for comfort and for ease of travel in increasingly crowded streets. The Electric Railway Presidents' Conference Committee began in the early 1930s to research a streetcar that could meet these criteria and save the flagging urban transit industry. These efforts resulted in the PCC Electric Street Car, which gave streetcars a new, progressive image.

Although most systems noticed an immediate increase in ridership and revenue, the PCC was ultimately unable to rescue an industry in crisis. While it was not a financial success in U.S. cities, the PCC car was a triumph of performance, efficiency and reliability. Its descendants are still in use in countries around the world.

Equipped with Proto-Sound 2.0 and its patented Proto-Speed Control system give each PCC car an incredible range of control. Operators can't believe how realistically engines equipped with Proto-Sound 2.0 can operate. Slow speed performance is simply unmatched by any other O Gauge manufacturer. But the sounds really make the PCC an outstanding model. Operators can create two types of automatic routes using any transformer with a whistle and bell button. After the route is created, the PCC car will automatically stop at each predetermined location and play a Proto-Effect Station Stop sound clip. It really adds to the fun of model railroading and only M.T.H. has it.

*All RailKing non-powered Locomotives feature no electrical components but do include operating mechanical couplers.

Debuting at the Chicago railroad industry equipment show in the fall of 1976, General Electric revealed the first of its Dash-7 line of locomotives, the C30-7. The locomotive was expected to replace the U30C, which at the time was GE's most successful six-axle model.

Utilizing numerous design changes, the external appearance of the C30-7 differed significantly from the U30C. The most obvious of these differences were the radiator "wings" located at the back of cab and a shortened hood. But each of these improvements came about as part of GE's desire to revolutionize their diesel offerings. Ultimately, their new locomotive succeeded by becoming a favorite of the major western haul hauling roads, the Santa Fe and the N&W.

Not since 1994 has the C30-7 been included in the M.T.H. product line. It makes its debut in the RailKing Scale category ten years later fully outfitted with the power and performance of Proto-Sound 2.0. Model railroaders looking for a value-rich road diesel need look no further than the C30-7. The patented Proto-Speed control system, digital sound variety of Proto-Sound 2.0 and awesome pulling power of two flywheel equipped motors will quickly endear this locomotive to its new owner.

In 1949 General Motors' Electro-Motive Division introduced the GP-7, its first hood unit diesel. Although the engine had neat, clean lines, it was not elegant when compared with the sleek car body engines that had been the standard mainline freight haulers for the last decade. The 1750 horsepower GP-9, introduced in 1954, was a perfect follow-up to the huge success EMD had enjoyed with the GP-7. Engineers loved the Geeps' narrow hood that allowed them to see both in front of and behind the locomotive, and mechanics found the engine easy to access and repair. It was not just the body's easy accessibility that made the engines functional; they could handle just about any job they were given. Railroads used them for yard duties, mainline and way freight, and even mainline and branchline passenger and commuter service. While the GP-7 had launched EMD powerfully into the road switcher market, the GP-9 sealed the company's position and established the GP-class engine as a standard on the rails.

Adding a full-featured, scale proportioned locomotive to your diesel roster has never been easier than with the RailKing Scale GP-9 diesel. Fully equipped with Proto-Sound® 2.0, RailKing Scale engines may be the best value in all of model railroading. Watching these engines creep down the rail with the industry's best speed control system and hearing the incredible variety of sounds may just make the GP-9 your favorite diesel. It's all possible thanks to the power and performance of Proto-Sound® 2.0.

Did You Know?

EMD ran a FTs-for-GPs trade-in program that often led the builder to use FT components in GPs, creating a 1350 horsepower hybrid locomotive, designated by an "M" after the engine name, as in GP7M or GP9M.

*All RailKing non-powered Locomotives feature no electrical components but do include operating mechanical couplers.

RAILKING

Priced at \$1.25 million in 1984, the EMD SD60 roared onto the scene with its "Super Series" adhesion control and powerful 3,800 horsepower engine that generated up to 120,000 pounds of tractive effort. Derived from the popular SD45 series, the SD60, like its SD50 sibling added dynamic brakes in a new location - just behind the cab. This unique location for the brakes gave engine spotters an identifying mark to distinguish SD50/60s from other SD engines. The only way to distinguish a 50 from a 60 however was to count doors. The SD60 had eight compared to the six found on the SD50.

Joining the RailKing® Scale lineup for the first time, the SD60 hasn't appeared in an M.T.H. catalog since 1996. Like all RailKing Scale diesels, the SD60 sports prototypical scale dimensions, two motors and the incredible sounds and features of Proto-Sound® 2.0. Operators will find no better locomotive for mainline work than these great pulling machines. The industry-leading Proto-Speed control™ feature allows unprecedented slow-speed performance no matter what the terrain or load. Programmed with an incredible array of digital sounds, the Proto-Sound® 2.0 system gives users more interaction and excitement including remote uncoupling anywhere on the layout - a feature you won't find anywhere else!

EMD and traditional O-27 diesel fans will no doubt find the exceptional value in these classic F-3 models is unmatched from any other manufacturer. Right at home with other traditional rolling stock and passenger equipment - like those found in the Rugged Rail® and RailKing® lineups - each Rugged Rail F-3 set includes many of the operating features found in our larger RailKing Scale® and Premier engines but at a fraction of the cost.

Every powered F-3 unit includes two precision flywheel equipped motors, each controlled with your choice of Loco-Sound® or Proto-Sound® 2.0 electronics. Regardless of which system you obtain, every Rugged Rail F-3 is equipped with realistic speed control for incredible slow speed performance with any AC toy train transformer.

FEATURES For F-3

- Metal Wheels and Axles

RailKing Rolling Stock

High quality, traditionally sized RailKing® Freight Cars feature detailed bodies and colorful paint schemes for the O Gauge railroader who doesn't want to sacrifice quality on his railroad.

Since the introduction of the RailKing® line in 1995, M.T.H. has produced an enormous variety of RailKing® freight cars. In fact, nearly 1,400 different RailKing cars have been released since the line's inception. No matter what era or part of the country you are modeling, the RailKing® freight car line is sure to have something you'll like.

Features

- Colorful, Attractive Paint Schemes
- Fast-Angle Wheel Sets
- Needle-Point Axles
- Near-Scale Proportions

Tank Car

Five different models in over 130 different paint schemes have appeared in the RailKing tank car category over the past nine years. Like all RailKing rolling stock, each car features crisp deco, intricately detailed yet durable ABS bodies and die-cast sprung metal trucks with metal operating couplers.

Over the next two pages, we've added 13 new paint schemes to our roster. When compared with other tank cars on the market, you won't find a better detailed more durable model from anyone because RailKing freight cars are great looking and built to last.

Reefer & Hopper Car

Nothing advertises a product like a colorful reefer car and nobody offers more roadname variety than those found in the RailKing line. Visit the M.T.H. website for a quick search of the 69 different paint schemes available in two RailKing Reefer car styles or choose from any of the four new schemes coming in 2004.

Like reefer cars, hopper cars - especially the more modern varieties - make great "canvasses" for colorful paint schemes. M.T.H.'s RailKing line has a long history of producing colorful hopper cars. In fact, over 129 different schemes have appeared on RailKing hopper cars since 1995. In 2004, eight more schemes will be available from which to choose.

M.O.W. Car

Maintenance of Way (M.O.W.) is an important part of railroad maintenance and can't be accomplished without heavy lifting equipment. Recreate your M.O.W. needs with RailKing Crane and Crane Tender Car.

Since 1997, M.T.H. has produced 63 different RailKing crane cars! Each crane can be manually operated and both the crane and the tender car feature operating interior lights. M.O.W. fans may also find our Heavy Duty Snow Plow a must have for their pike.

Flat Car

Sitting at a crossing and waiting for a freight train to clear and you're likely to see a lot of flat cars passing you by. Plain in nature but incredibly diverse in ability, the lowly flat car is one of railroading's most popular cars. Choose from 22 different flat cars each equipped with a unique load.

Box Car

An unbelievable seven different models in 272 different paint schemes have been produced by M.T.H. in our RailKing Line since 1995! O Gauge model railroaders have never had such a wide array of choices in so short a time frame from which to choose.

Each car features crisp deco, intricately detailed yet durable ABS bodies, die-cast sprung metal trucks with metal operating couplers that ensure that these cars not only look good, they'll handle the wear and tear for years to come.

In 2004, choose from 12 new schemes that have been added including a continuation of our State series with five new states and our 6464 series with three new cars. In addition, 11 Major League Baseball™ team cars are featured later in the catalog.

Caboose Models

Perhaps the most famous of all rolling stock, the caboose is a distant memory for railroad's today having long since been replaced by modern technology. But the caboose lives on in the memories of many housing much of the romance of railroading. Within the RailKing line, more than 138 different paint schemes have been created since 1995. This year choose from 18 additional schemes in four different models.

Operating Freight Car

Railking operating freight cars add a new dimension and excitement level to your O Gauge layout with realistic action and quiet smooth operation in a way other operating cars cannot.

Each car comes to life when parked on an operating track section. When the track section is activated, the signal man will emerge from the opening car door with his lantern lit and the helicopter will spin up and lift off, rising as high as 10 feet in the air.

Features:

- Intricately Detailed Durable ABS Bodies
- Metal Wheels and Axles
- Die-Cast 4-Wheel Trucks
- Operating Die-Cast Metal Couplers
- Colorful, Attractive Paint Schemes
- Separate Metal Handrails
- Fast-Angle Wheel Sets
- Needle-Point Axles
- Smooth, Realistic Operation
- Activation From Any Operating Track Section

RailKing Passenger Car

RailKing Passenger Cars are available in popular 60' Streamlined style bodies that are sure to match whatever era you model. Configured in 4-car, 2-car and single-car configurations, each prototype features car interior detail, overhead interior lighting, end-of-car diaphragms and intricate under-car detail. All configurations are mounted atop die-cast metal 4 or 6-wheel trucks with operating metal couplers, metal wheels and metal axles.

In 2004, we've returned the 19th Century Overton passenger car to the RailKing lineup. Like the 60' 20th Century cars, the Overton models feature intricate detail, car interiors and die-cast metal trucks with operating metal couplers. They make a great complement for any 19th Century steam locomotive.

Designed to bring authenticity and smooth performing operation to any O Gauge layout, modelers will find no finer O Gauge value than RailKing Passenger Cars.

Features

- Durable ABS Intricately Detailed Bodies
- Overhead Interior Lighting
- Die-Cast 4 or 6-Wheel Trucks
- Operating Die-Cast Metal Couplers
- Colorful, Attractive Paint Schemes
- End-of-Car Diaphragms
- Fast-Angle Wheel Sets
- Needle-Point Axles
- Detailed Car Interiors
- Detailed Car Undercarriage

Since 1992, M.T.H.'s Premier Line has infused the O Gauge marketplace with exciting & innovative products never before seen in 1/48th proportions. No other manufacturer can lay claim to many of the unique & exciting die-cast steam locomotives, heavy duty diesel engines, rolling stock or passenger consists that M.T.H. has produced during the past 10 years.

Many of these O Scale proportioned models are beautifully detailed replicas of the real-life prototype & are aimed at serious model railroaders. Collectors often consider their Premier models the pride of their display cases, but each is designed & produced to be run ensuring years of action & enjoyment to all that own them.

Over the next several pages you'll find a sampling of the 2004 Premier steam, diesel & rolling stock items for your review. Many or most diesel engines feature multiple cab numbers & come with non-powered units for the creation of low-cost multi-headed consists. You'll find all the details, including the specific cab numbers used on each locomotive, freight & passenger car by visiting www.mthtrains.com.

At M.T.H. we appreciate the decisions you must make when selecting a manufacturer's products. Often the best products are those that feature the best value. M.T.H. products are competitively priced, built to exacting quality control standards & feature more standard features than similar products offered by our competitors. Take the time to visit any M.T.H. Authorized Retailer or Authorized Mega Station to see for yourself the innovation & excitement of M.T.H.'s Premier Line products.

- Remote Controlled Proto-Coupler™
- Engineer and Fireman Figures
- Operating Firebox Glow
- Metal Handrails and Decorative Bell
- Decorative Metal Whistle
- Operating Marker Lights
- Lighted Cab Interior
- Synchronized Puffing ProtoSmoke™ System
- Operating Tender Back-up Light
- Locomotive Speed Control
- 1:48 Scale Proportions
- Proto-Sound® 2.0 With The Digital Command System Featuring:- Freight Yard Proto-Effects™
- Unit Measures: 28" x 3 7/8" x 2 3/4"
- Operates On O-42 Curves

Synchronized Puffing Smoke w/Variable Output Control

Opening Smoke Box Door

Late in the steam era, the Reading's new president, Reville W. Brown had been impressed with the performance of the Lehigh Valley's (of which he had been president) 4-8-4's. He had concluded that such a locomotive would be the perfect choice to replace the Reading's stable of 2-8-0 I-10 locomotives.

Like all railroad's, the Reading faced wartime material restrictions that could impact the design and performance of a new locomotive. To avoid these compromises and incorporate its ability to assemble its own engines, the Reading settled on rebuilding the I-10s which utilized an usually large boiler and firebox. Combining the I-10 boiler with Baldwin drive train components allowed the new T-1 locomotives, which were assembled in the Reading shops, to come in nearly 35% under the cost of a completely new locomotive. A total of 30 T-1s were built by 1947 and most were assigned freight duties. The last 10 T-1 locomotives to roll out of the shops were equipped with steam heat and air signal lines so that they could handle passenger work as well.

Intricately detailed and outfitted with the power and performance of Proto-Sound 2.0, the M.T.H. Reading T-1 is the first Reading prototype to appear in the Premier Line. Like all Premier steam engines, the T-1 is equipped with synchronized puffing smoke, Proto-Speed control for incredible slow speed action and the hobby's largest variety of prototypical steam engine sounds.

PREMIER

2-8-0 H-3 Consolidation Steam Engine

The 2-8-0 Consolidation wheel arrangement for steam locomotives was one of the most widely used and copied variants of steam motive power because its attributes made it an excellent choice for mainline, branch, freight and even passenger work. First appearing on the Lehigh Valley in 1866, 2-8-0s continued in service well into the 1950s with the Pennsylvania the leading user of all railroads.

The Pennsy created seven classes of Consolidations with the earliest being the 1885 H-3. These 50 inch driver locomotives were the first Pennsylvania steam locomotives to utilize the road's trademark Belpaire firebox. Hundreds were built over a ten year span and were utilized in all levels of service before being replaced with the more common fat boilers of Pennsy's H-4 thru H-10 series of consols.

This small and diminutive 2-8-0 is the perfect choice for modelers looking for a scale proportioned 19th century steam locomotive. Intricately detailed and outfitted with the power and performance of Proto-Sound 2.0, the M.T.H. Pennsylvania H-3 is equipped with synchronized puffing smoke, Proto-Speed control for incredible slow speed action and the hobby's largest variety of prototypical steam engine sounds.

Synchronized Puffing Smoke

P R E M I E R

The Central of New Jersey, like many railroads of the day, required ever-changing motive power to cope with increasing traffic needs. As its aging fleet of 4-4-0s, 4-4-2s and 4-6-0s proved unable to handle greater passenger and freight loads, the CNJ turned to the standard of the day; the 4-6-2 Pacific type.

Five P47 Pacifics headed up the Jersey's famed passenger trains. Three locomotives - painted in a beautiful blue livery and numbered 831, 832 and 833 - were used for the Blue Comet. A fourth P47, No. 834 was painted green and pulled "The Bullet" while the last locomotive, No. 835, sported all black and hauled the Queen of the Valley.

Following on the heels of the 1998 M.T.H. Premier Line Blue Comet, the green Bullet debuts in 2004. Sporting additional detail and the incredible power and performance of Proto-Sound 2.0, the Bullet may well be the smoothest running steam locomotive in your roster. Certainly its patented synchronized puffing smoke and Proto-Speed Control are unmatched by any other manufacturer and give the engine a level of performance you have to see to believe.

4-6-4 Steam Locomotive

Passenger volume for the Atchison, Topeka & Santa Fe's 922 miles of main line service between La Junta, Colorado and Chicago resulted in the production of a new class of 4-6-4 Hudson locomotives from the Baldwin Locomotive Works. Six of these Class 3460 oil burning locomotives were delivered in 1938 to the Santa Fe. At the time, the locomotives were the largest 4-6-4 types yet produced and utilized a fuel oil tank built into the water tank inside the tender. Such an arrangement allowed for easy conversion of the locomotive to a coal-burning type.

The Santa Fe, like many railroads in the 1940s flirted with streamlining. Engine No. 3460 was actually delivered to the A.T.S.F. with light steel shrouding and a gloss blue paint scheme that earned the nickname "Blue Goose". M.T.H. released the streamlined version in 2002 and is proud to now offer the unshrouded version of one of the Santa Fe's most important locomotives.

Fully outfitted with the power and performance of Proto-Sound 2.0, the Class 3460 Hudson, like all Premier steam engines, is equipped with synchronized puffing smoke, Proto-Speed control for incredible slow speed action and the hobby's only Passenger Station Proto-Effects which recreate the sound of an engine arriving at a station, complete with arrival and departure announcements, conductor direction and boarding and disembarking sounds.

Prototypical Leading Truck for Each Cab Number

The Norfolk & Western was renowned, perhaps better than any other railroad, for its steam power efficiency and no locomotive better exemplified this than the J Class Northern. Debuting in 1941, the 4-8-4 rolled onto the rails with its beautiful streamlined cowling gracing an incredibly powerful and efficient powerplant.

Developed to meet the growing passenger service requirements leading up to and through World War II, the J Class locomotives were powerful and more than capable of tackling the grades of the Blue Ridge mountains. Yet, they could "run like a rabbit" on the flats, easily reaching speeds greater than 100 miles per hour with 12 to 14 passenger cars in tow. Even with the decline in passenger service after the war, the N&W added more J's to their fleet and created some of the country's most elegant passenger service runs. Famous trains like the Powhatan Arrow were renowned for their amenities and service. Despite the growing rise of dieselization, the J Class locomotives were able to remain in service until 1959, longer than any other major railroad's use of steam power.

Now you can enjoy the return of the J to the M.T.H. Premier Line with a new and improved version of one of our finest steam engine models. Fully outfitted with the power and performance of Proto-Sound 2.0, the 2004 model, like all Premier steam engines is equipped with synchronized puffing smoke, Proto-Speed control for incredible slow speed action and the delicious sounds of Passenger Station Proto-Effects.

Dash-9

Throughout history, engineers have tried to generate more horsepower with smaller, more compact engines. General Electric's Dash-9 is no exception. Using a turbo-charged 16 cylinder prime mover, the Dash-9, also known as the C44-9W, can reach 4,400 horsepower. The Dash-9 provided many mechanical and electrical improvements over the Dash-8 line, and it is, in fact, both the culmination of the GE "Dash" engines and the forebear of a new class of locomotives. Later locomotives in this family are called AC-class engines.

Model railroaders looking to recreate the evolution of late twentieth-century motive power can do no better than an M.T.H. Premier Line Dash-8 with Proto-Sound 2.0. Outfitted with incredible sounds and operating features not found elsewhere, each handsome locomotive is produced in three different cab numbers and can be mated with an optional non-powered unit in a different cab number for a realistic 2, 3 or 4-unit lashup.

AC6000 Diesel Engine

The AC6000 sprung from the horsepower wars of the late twentieth century. As manufacturers fought to best each other with single-unit engines boasting more and more horsepower, General Electric introduced the AC4400 convertible. These initial AC-class engines provided 4,400 horsepower, but they were especially designed to be converted to the 6,000 horsepower Deutz 7HDL16 engines as soon as the engines were ready. The first true AC6000 came about one year later, in December 1995, with some changes to the body as well as the more powerful engine. The most noticeable change is that the air reservoirs were raised to allow for more fuel capacity. This rearrangement left a large step/platform on the side of the engine. About 150 AC6000s were sold by the end of 1999, and they are still in production today.

M.T.H. is proud to return this monster of the Mainline to our Premier Line diesel roster. Each locomotive is equipped with the unparalleled power of Proto-Sound 2.0 and available in three cab numbers to ensure that you won't find a better value in any other manufacturer's scale sized O Gauge diesel lineup. We've also added non-powered models to our roster in a fourth cab number for those interested in multi-unit lashups that don't require the sheer pulling power found in our powered versions.

The GG-1 could be called the Gold Standard for electric locomotives, with its unparalleled longevity and road performance. Its incredible performance record is probably due to the fact that it had to compete for its spot on the Pennsy roster. When the PRR was in the market for a new high-speed passenger locomotive, it was given two prototypes to consider. The GG-1, based on the New Haven EP3, defeated the R1 in the contest to determine which engine Pennsy would order, and so began the engine's unparalleled dominance.

The 139-unit GG-1 fleet was built between 1934-44, primarily for passenger work, though during WWII and in the 1950s when passenger train miles were reduced the engines did dual duty, pulling freight trains when needed. The GG-1 survived longer than any other locomotive design, lasting well into the 1980s, and survived both the railroad that created it and that road's successor, Penn Central.

This all die-cast locomotive returns to the M.T.H. lineup completely outfitted with the power and performance of Proto-Sound 2.0. The only scale GG-1 that includes conventional remote controlled Proto-Couplers and Proto-Speed Control that really works, GG-1 fans won't find a better operating model anywhere.

Features

- Directionally Controlled Headlights
- Intricately Detailed Die-Cast Body
- Metal Wheels, Axles and Gears
- Operating Pantographs
- Die-Cast Truck Sides & Pilots
- (2) Remotely Controlled Proto-Couplers™
- Authentic Paint Scheme
- Metal Chassis
- (2) Precision Flywheel Equipped Motors
- Lighted Cab Interior
- Illuminated Number Boards
- Lighted Marker Lights
- Locomotive Speed Control
- (2) Engineer Cab Figures
- Proto-Sound® 2.0 With The Digital Command System Featuring: Passenger Station Proto-Effects™
- Unit Measures: 20" x 2 5/8" x 4"
- Operates On O-72 Curves

By the mid-1960s, EMD's General Purpose locomotives, known as "Geeps," had gained a favorable reputation with railroads. They were hard working road switchers known for their versatility and dependability. The 1500-h.p. GP-7, introduced in 1949, had set the standard for the series of locomotives, and the GP-40, which came along 16 years later, was to be yet another improvement in the GP family tree.

The GP-40 doubled the horsepower rating of the GP-7 and introduced the 645-series engine to the Geep heritage. EMD had relied upon the 567-series prime mover for years. The 3,000-h.p. in the GP-40 was indeed impressive, but it presented a problem. With only four axles and the barely adequate wheel-slip control systems then available, GP-40s had adhesion problems. While the units were being fixed at the La Grange, IL, plant, EMD supplied GP-40 buyers with temporary units. An improved electrical system fixed the adhesion problem on the GP-40s and they were ready to roll on U.S., Canadian and Mexican railroads once again.

By choosing one of the finest diesel road engines available today, your M.T.H. GP-40 engine will arrive with features unmatched by others. The incredible sound and action found in a Proto-Sound 2.0 equipped M.T.H. engine truly brings an interactive experience to your locomotive operations. Realistic, slow-speed operation is controlled through the industry-leading Proto-Speed Control system. Remotely controlled Proto-Couplers which can be fired open at any time in conventional or command modes gives the operator unprecedented switching functions for a truly fun operating experience.

SD40-2 Diesel Engine

Offering better reliability and lower maintenance costs than the higher powered SD-45, EMD's SD40-2 enjoyed a long production run of 3,100 units. The 3,000 horsepower diesel was the primary motive power for many railroads throughout the 1970's and 80's.

One of the most striking features of the EMD workhorse was its long "back porch" or decking that extended in front and behind the locomotive's cab. These porches differentiated the SD40-2 from its earlier cousin, the SD35 and were the result of the SD40-2's requirement for a longer frame, which helped increase the locomotive's tractive effort.

As one of the most popular road engines for EMD, the SD40-2 has been well represented in the O Gauge marketplace in the past. M.T.H.'s Premier Line SD40-2 offers the user more features and value than any other model. Fully equipped with Proto-Sound 2.0, operating smoke, Proto-Speed Control and incredible details ensure that this engine operates as well as it looks.

U50C Diesel Engine

The U50 and U50C were General Electric's atypically flat-faced solution to Union Pacific's longing for extremely high horsepower single locomotives. These twin-engined monsters produced 5000 hp using GE's FDL-series engines. The U50C differed significantly from the earlier U50 in several ways: the radiators and generators changed places, with the U50C's radiators at the center and generators at the ends, it measured 79 feet long (to the U50's incredible 83 feet 6 1/2 inches), and the U50C had two three-axle, three motor trucks, as opposed to the earlier model's four four-axle trucks. UP bought 40 U50Cs between 1969 and 1971.

Capture everyone's attention with this huge powerhouse of a locomotive. Fully outfitted with Proto-Sound 2.0, the U50C is value-packed with loads of action, excitement and fun. You'll be amazed at how smoothly and realistically the engine creeps thanks to the industry-leading Proto-Speed Control system. Fully detailed and dozens of quality digital sounds ensure that the U50C looks and sounds like the real thing.

GP38-2 Diesel Engine

In the late 1960s, EMD responded to a rash of complaints that the GP30 and GP35 were less dependable than their predecessors. They created the GP38 and its variant, the GP38-2. A descendant of the famous EMD F-Series engines, the GP38-2 became as much a staple on the railroads in the 1960s and '70s as the F units were in the 1940s and '50s. While the GP38-2's prime mover provided less horsepower than its contemporaries, its reliability and excellent performance as a general purpose locomotive made it among the best selling of the Geeps. Almost every domestic railroad, large or small, has had its name printed on the side of a GP38.

The GP38-2 will certainly be a stalwart on your railroad, just as it has been on the prototype rails. Equipped with Proto-Sound 2.0, the GP38-2 gives you more performance and value than any other road diesel from other manufacturers. In fact, thanks to the industry-leading Proto-Speed Control system, your GP38-2 can run slower and smoother than anything on your roster. Coupled with the anywhere, anytime action of the remot-ed Proto-Coupler system, you'll have a switching workhorse of no equal.

Producing 3,000 horsepower and achieving a top speed of 103 mph, F40PHs have regularly traversed this country - perhaps more than any other locomotive. When it was created by EMD in 1976, it was intended for short-haul and commuter trains heated by head-end electricity, but the unit was chosen over the SDP40F, another EMD cowl unit, to head Superliner trains. Once that decision was made, the 500-kw alternator and 1200-gallon fuel tank wasn't adequate. The unit was modified with an 800-kw alternator and an 1800-gallon fuel tank.

The F40PH evolved from the SD-45 and SDO-45 designs. The B-B cowl type locomotive proved remarkably versatile and dependable. Whether heading Amtrak's San Francisco Zephyr and Empire Builder or servicing commuter lines across the nation, the F40PH became an instant railfan favorite.

Pairing these all-new F40s with Bombardier and Bi-Level commuter cars will add dimension and variety to your modern-era roster. Each engine is outfitted with Proto-Sound 2.0 and contains unique passenger station Proto-Effects only available from M.T.H. Gliding into a station with slow speed precision is possible thanks to the industry-leading Proto-Speed Control system and the unique passenger station sounds make each station stop a truly interactive experience.

World War II had called for locomotive manufacturers to adhere to production guidelines as set by the War Production Board. With the war's end in 1945, EMD, like other major competitors, worked hard to meet industry demand after four years of restricted supply. In the freight cab market, EMD released their F-series. The F-3 headlined the series, debuting in the summer of 1945, a few months before the official end of the war.

By 1949, despite the fact that the F-3 had become EMD's all-time selling carbody diesel (over 1,800 were produced) it was replaced with the F-7. The F-7's closely resembled the F-3s sharing their smooth faced pilots and coupler shrouds. In fact the last F-3s to be built differed in appearance from F-7s with a pair of rectangular roof openings to discharge air from the dynamic brakes. Despite their similar appearances, the F-7, initially rated at 1,500 horsepower, became the all-time selling carbody diesel with over 3,700 going to 49 different roads. They stayed in service until 1970 and assured itself in the railroad record books as a stalwart of diesel productivity.

EMD and Premier fans will no doubt want to add this stellar replica of the F-7 to their diesel rosters. Fully equipped with the power and performance of Proto-Sound 2.0, the M.T.H. F-7 ABA diesel set will prove to be the finest running and most feature-infused carbody model yet produced.

Milwaukee Road's Little Joe might just as well be called Lonesome Joe since no railroad wanted the engine. Actually, General Electric had contracted with the Soviet Union to build the locomotives for their Siberian railroad after World War II ended. But as relations between the Soviets and Americans began to deteriorate into the Cold War, the order was rescinded by the U.S. Government after GE had completed construction but not yet delivered 20 brand new engines.

Turning to U.S. railroads, GE was unable to find a buyer for several years. Clearly in a buyer's market, GE eventually reached an agreement with the Milwaukee Road to sell the entire lot plus parts for the fire sale price of \$1 Million. But even that agreement fell apart when the Milwaukee's brass elected to move toward dieselisation and scuttled the order. Eventually demand for electrification returned to the Milwaukee Road and 12 units were purchased from GE. This time, though, GE commanded the sale's terms.

At long last, the Little Joe (named by a Milwaukee Road employee for Russia's Joseph Stalin) comes to O Gauge in the form of an M.T.H. Premier Line locomotive. Fully detailed and constructed of die-cast metal, the Little Joe brings all the performance and value of a Proto-Sound 2.0 equipped locomotive to your layout. It's industry-leading Proto-Speed Control system and unique digital sounds will make this long-awaited locomotive a must-have for your roster.

To a new municipal subway system for New York City began to take shape in 1925 that eventually would become known as the IND (for Independent). Unlike the other two subway divisions in New York, the IND was a basic but very efficiently engineered system with stations built on a larger scale designed with the rider in mind.

To maximize the new system, the IND began ordering their first cars under contract R1. This code is still used today with the current car type being R142 (though there haven't been 140 or so car types). The R1 subway car first appeared in 1927 and measured 60' in length. Though criticized as inferior to cars used on the IRT and BMT systems, the initial R series of cars (R1 - R9) continued in use for 45 years.

The R1 returns to life as a 1/4 scale Premier Line 4-car subway set in 2004. Featuring opening car doors and a detailed interior, each set is controlled by a powered car outfitted with the incredible sounds and features of Proto-Sound 2.0. Thanks to the industry-leading Proto-Speed Control system and the market's only Station Stop Proto-Effects™ digital sounds, these cars will operate as well as they look. Imagine the look on your friends and family when you glide one of these sets into a station as it announces its arrival! They'll be even more amazed after the car stops and the sounds of subway life begin broadcasting. It's sure to remind any subway commuter of those daily trips under the streets.

Opening Car Doors

The Budd Company has long been held synonymous with passenger car construction. Yet Budd proved to be very revolutionary in the design of self-propelled passenger cars as well. One of their most unique designs came from a project commissioned by the Chicago Burlington & Quincy Railroad, who simply asked for a stainless steel train, powered by a diesel engine and capable of travelling 100 miles per hour. The consist needed to be equipped with a Railway Post Office compartment, contain space enough for 25 tons of baggage and express and be capable of seating 70 passengers. The CB&Q left it up to the Budd Company to determine how they would accomplish the task.

The 3-unit articulated consist that Budd ultimately delivered employed the use of lightweight stainless steel construction that borrowed on aircraft fuselage technology. By using a tubular shape, Budd was able to disperse the cars' weight over fewer trucks while creating a stronger design than traditional car bodies afforded. The final design was unique not only in appearance but in function as well. The low, sweeping design and rounded "shovel" nose made Zephyrs a popular attraction and frequent subject of railfan shutterbugs all over the country.

M.T.H. is proud to introduce the Pioneer Zephyr to our Premier lineup in O scale proportions. Its sleek look and smooth operating performance are sure to please both the operator and collector. The Zephyr is available with the features shown.

Eleven different hopper car designs in over 180 different paint schemes have appeared in M.T.H.'s Premier Line since 1997. Now an entirely new car representing a time in history where steel was at a premium appears in 2004.

The composite hopper car used man made materials in place of steel siding to help save resources needed for World War II when the government froze domestic use of raw materials. Featuring intricate but durable body details, separate wire form handrails and undercarriage detail guaranteed to appeal to even the most discriminating freight car lover ensure that these cars will find a place on many a scale pike.

Specialty Flat Car

Supersized flat cars for moving heavy, bulky items have become a more common sight on today's railroads as manufacturers rely on this dependable, safe form of transportation in lieu of public roads. In fact, the sheer weight of some of these objects prevent their transportation on highways and even some branch lines. Indeed, such shipments often require combining rail and waterways and can take months to accomplish and cost hundreds of thousands of dollars

Operating Rolling Stock

Premier Line operating freight cars add a new dimension and excitement level to your O Gauge layout with realistic action and quiet smooth operation in a way other operating cars cannot.

Each car comes to life when parked on an operating track section. When the track section is activated, the box car slowly slides open and a signal man leans out of the opening car door with his lantern lit. After a moment or two, he steps back inside the car and the door closes behind him.

Operating Box Car w/Signal Man

All Measure 11 5/8 x 2 1/2 x 3 3/16

Box Car

Seven different box car models in 180 different paint schemes have been produced by M.T.H. in our Premier Line since 1996 giving rail-roaders a huge array of choices unmatched by others during this same time frame. Most of the decoration used on Premier Line cars are faithful recreations of actual prototypes. Others have benefited from the creative input of our artwork designers. All feature crisp deco, intricately detailed yet durable ABS bodies, die-cast sprung metal trucks with metal operating couplers. These attributes ensure that these cars not only look good, they'll handle the wear and tear for years to come.

Reefer Car

Three different models in 71 different paint schemes have given reefer car lovers a lot of choices in M.T.H.'s Premier Line over the past few years. Fourteen new additions arrive in 2004 including six in an all-new car - the R50B Express Reefer.

This new model features intricate but durable body detailed, opening doors and separate wire form handrails and undercarriage detail guaranteed to appeal to even the most discriminating freight car lover.

Tank Car

Five different models in over 112 different paint schemes have appeared in the Premier Line tank car category over the past ten years. Like all Premier Line rolling stock, all feature crisp deco, intricately detailed yet durable ABS bodies, die-cast sprung metal trucks with metal operating couplers.

Over the next four pages, we've added 8 new paint schemes to our roster. When compared with other tank cars on the market, you won't find a better detailed more durable model from anyone because Premier Line freight cars are great looking and built to last.

Flat Car

Moving freight has always been the railroad's primary job - whether it be people or objects. When the automobile and trucking industry really began to take off, the railroads suffered from a loss of traffic. But as time passed, it became clear to the transportation industry that the railroad was still an efficient means to move freight.

Today, it's not uncommon to sit at a crossing and see hundreds of flat cars with trailers passing you by. The M.T.H. Premier Line features several scale proportioned truck trailers mounted atop flat cars to capture this vital aspect of freight movement. Choose from 10 different flat cars each equipped with a unique load.

Caboose

The caboose is perhaps the most popular of freight cars despite its extinction from modern real-life freight consists. Yet model railroaders continue to make the caboose a fan favorite and have given M.T.H. the incentive to produce six different models since 1996.

An eighth model is debuting in the M.T.H. Premier Line in 2004 along with 16 other schemes in three of our most popular models. M.T.H. fans have long found the Premier Line caboose to be an exceptional value. We even include a brakeman figure inside for an added touch of realism.

MTH Premier O Scale freight car sets are the perfect complement to many of the locomotives featured earlier in this catalog. They also go great with any manufacturer's scale proportioned O Gauge locomotives.

Each car in these sets is individually numbered for authentic realism. And, each set is available in two item numbers. The second item number features an entirely different set of 6 cars, each also individually numbered, allowing you to obtain a total of 12 different numbered cars if desired. When you prefer the convenience of a ready-to-run unit train, M.T.H. Premier Line 6-car sets are a great choice.

Passenger Set

Premier Line Passenger Cars are available in several popular style bodies that are sure to match whatever era you model. Configured in 5-car, 4-car, 2-car and single-car configurations, each prototype features car interior detail, overhead interior lighting, end-of-car diaphragms and intricate under-car detail. All configurations are mounted atop die-cast metal 4 or 6-wheel trucks with operating metal couplers, metal wheels and metal axles.

In 2004, we're introducing an all-new car to our roster, the modern era commuter Bombardier. Like our Premier Line Bi-Level cars, these sets are offered in 4-car and 2-car configurations and are decorated in prototypical attractive commuter paint schemes.

These sets are designed to bring authenticity and smooth performing operation to any O Gauge layout, modelers will find no finer O Gauge value than Premier Line Passenger Cars.

Features

- Durable ABS Intricately Detailed Bodies
- Metal Wheels and Axles
- Overhead Interior Lighting
- Die-Cast 4-Wheel Trucks
- Operating Die-Cast Metal Couplers
- Colorful, Attractive Paint Schemes
- End-of-Car Diaphragms
- Separate Metal Handrails
- Fast-Angle Wheel Sets
- Needle-Point Axles
- Detailed Car Interiors
- 1:48 Scale Dimensions

5-Car Premier Streamlined Passenger Set

It is hard to match the excitement and beauty of a long, sleek passenger train speeding down the rails. M.T.H.'s Premier Line scale streamlined passenger cars and sets will bring exactly the right, realistic look to your passenger consists.

No other manufacturer matches the quality and value found inside an M.T.H. Premier Line passenger car. Using an intricately detailed, Set durable ABS body atop smooth rolling die-cast metal trucks results in a lightweight car that won't bog down a locomotive struggling to pull heavy aluminum passenger cars. What's more, each Premier Line passenger car features detailed car interiors and overhead lighting for a realistic and authentic appearance. Separately sold passenger car figures can be added for those desiring an added touch of realism.

5-Car Madison Passenger Set

It is hard to match the excitement and beauty of a long, sleek passenger train speeding down the rails. M.T.H.'s Premier Line scale Madison or "heavyweight" passenger cars and sets will bring exactly the right, realistic look to your steam era passenger consists.

No other manufacturer matches the quality and value found inside an M.T.H. Premier Line passenger car. Using an intricately detailed, yet durable ABS body atop smooth rolling die-cast metal trucks results in a lightweight car that look right at home behind any die-cast steam locomotive. What's more, each Premier Line passenger car features opening car doors, detailed car interiors and overhead lighting for a realistic and authentic appearance. Separately sold passenger car figures can be added for those desiring an added touch of realism.

Features

POWER UP

While the power pack that comes with every RailKing® Ready-To-Run set provides plenty of power to operate your set & several additional cars, you'll find as you add more track, cars, & accessories to your layout that you need more power to keep everything running. Fortunately, RailKing has you covered.

If you want to power up gradually, you can purchase additional 50-watt Z-500®, 75-watt Z-750® & Z-1000™ transformers as the need arises. Each of these will power a single train on its own loop of track or a few operating accessories.

If you want to max out your power potential, the 400-watt Z-4000® is the most powerful transformer to receive the UL-listing for the model railroading hobby. The Z-4000 has two separate throttles to let you power two different tracks, & it has two fixed power outputs you can use for operating accessories. A single Z-4000 will power a lot of layout.

Remote Control

The RailKing remote control provided in your Ready-To-Run set gives you the option to move around the room while you run your train. However, as you compile more trains, more track, & begin more advanced operations, you might find yourself looking for a more sophisticated remote control system. M.T.H. offers two to choose from:

The Z-4000 Remote Control System: designed to work with the 400-watt Z-4000 transformer, this remote can control up to 3 Z-4000s at a time, for a total of 6 loops of track, all from one handheld. The LED screen makes it easy to keep an eye on your track voltage.

The DCS Remote Control System: the ultimate in control, the DCS system gives you individual control of each Proto-Sound® 2.0 engine on your layout & gives you access to literally hundreds of new & exciting features & engine settings. Add the optional AIU & you can control each accessory & switch from the same remote control.

Whatever option you choose, let M.T.H. & RailKing put you in charge of your empire.

Why the U.L. Listing?

M.T.H. Electric Trains is committed to manufacturing safe, U.L. approved transformers & power supplies. By subjecting our transformers to the strenuous tests & requirements of the U.L. laboratories, M.T.H. helps ensure that these products meet the same requirements as other consumer electronics sold today. When choosing a new transformer, model railroaders should only look for those that have received a U.L. listing.

MAX YOUR POWER

For the operator on a budget, the Z-500 & Z-750, packing 50-75 watts of power, are excellent power choices for small & medium sized layouts or for anyone looking to power model railroading accessories. Featuring a U.L. approved design, both the Z-500 & Z-750 utilize a transformer & a separate controller which contains bell, horn & direction buttons that can control any manufacturer's locomotives & sound systems including Proto-Sound® equipped steam, diesel & electric locomotives.

Inexpensive Way to Power Extra Accessories

The most powerful Ready-to-Run train set transformer you can find, the Z-1000 boasts 100 watts of power, a U.L. approved design & separate 14v Accessory Ports. Its robust design will provide years of service & power enough for any starter set to a moderate size layout. Available in many RailKing starter sets or separately, the Z-1000 is the perfect solution for a growing O Gauge layout.

Includes 14v Accessory Ports

Z-500 & Z-750 Transformer Features

- U.L. Approved
- 50 or 75 Watts Max Power Output
- Controller LED On Light
- Smooth Operating Throttle Knob
- Built-In Circuit Breaker Protection
- Individual Bell, Horn and Direction Buttons

Z-1000 Transformer Features

- U.L. Approved
- 100 Watts Max Power Output
- Controller LED On Light
- Smooth Operating Throttle Knob
- Built-In Circuit Breaker Protection
- Individual Bell, Horn & Direction Buttons
- 14v Accessory Port

RailKing Remote System

Play Music Through any Loco-Sound® Engine

Infrared remote control gives you freedom to move around while still controlling your train. Designed for use with Z-500 or Z-750 transformers.

System Includes:
1 Remote Control
1 Remote Lock-On

Range:
Approximately 15 feet

Operators of any O, S, or Standard Gauge locomotive, regardless of manufacturer, will appreciate the power & control features found in the 400-Watt Z-4000 transformer - the only U.L. Approved 400-Watt RMS transformer available today. The transformer's control panel has a voltage display, amperage display, & horn, bell, direction, & programming buttons for two track outputs. Two additional fixed voltage outputs are also available, making the Z-4000 the perfect choice for operating locomotives & accessories.

Perhaps the most exciting feature of the Z-4000 is its microprocessor controlled operating system. There is actually a powerful computerized brain that makes the Z-4000 highly upgradeable. In fact, the Z-4000 has been designed so that add-ons like a walk-around throttle system will be easy & quick to install & use. This product has earned the UL listing mark.

Z-4000 Transformer Features

- UL Listed To US & Canadian Safety Standards
- Pure Sine Wave Power Signal
- (2) 21v Variable Track Outputs
- (1) 14v Fixed-Voltage Output
- (1) 10v Fixed-Voltage Output
- Internal Cooling Fan
- On/Off Power Switch
- Expansion Port for Z-4000 Remote Control System
- Compatible As Power Source For All O Gauge AC-Powered Locomotives
- (2) Voltage LED Displays
- (2) Amperage LED Displays
- Resettable Circuit Breakers for Each Output
- Large Red LED Overload Indicator
- Large Green LED Power On Indicator
- Measures: 8 3/4" (H), 11 1/8" (D), 14 3/4" (W)

400 Watts! Most Powerful U.L. Listed Train Transformer

Z-4000 Remote System

DCS Compatible

Puts 400 watts of power in the palm of your hand! Access conventional Proto-Sound features from anywhere on your layout. 900 MHz remote controls up to three Z-4000 transformers & six loops of track. Requires Z-4000 transformer.

Z-4000 Remote System Features

- 1 Z-4000 Remote Control
 - 1 Remote Receiver
- Range:**
Approximately 30 feet

There is a new way of controlling model railroads today that you've got to see to believe. It's called DCS (for Digital Command System) & it's the most revolutionary product to hit model railroading since locomotives first became equipped with sound!

Unlike traditional or conventional means of operating a model railroad, command systems allow the user to independently control each engine even if other engines are on the same track at the same time. The concept has been around since the early 1990s, but only DCS makes it simple & easy to use thanks to its state-of-the-art technology & intuitive interface.

The DCS Remote Control System allows you to leave track voltage constant and control multiple Proto-Sound 2.0 equipped engines individually. Thirty-two buttons & an LCD display provide total control over Proto-Sound 2.0 features such as setting scale mph, passenger station announcements, & setting multi-unit lash-ups, etc.

A single DCS Remote handheld will allow you to control Proto-Sound 2.0 locomotives in command mode, TMCC equipped engines in command mode (when you connect a Lionel Command Base to the TIU) & all conventional 3-rail O Gauge engines at the same time.

one system
TOTAL CONTROL

SIMPLE. EASY. FUN.

Once wired up you are ready to run! Thanks to the simplicity of the DCS remote control's intuitive interface. You'll need to "add" your engines into the remote. There are no names, numbers or complicated commands, the DCS remote does most of the work for you!

- Go to the engine set up menu
- Choose your engine choice*
- DCS will go out & "look" for Proto-Sound 2.0 command equipped engines on your layout. When it finds one, it adds it into the remote & tells you when it is done.

* TMCC operation requires a TMCC command base & DCS TIU/TMCC cable. (item #.50-1018)

- Press the TR button & select the variable track you wish to control
- Use the thumbwheel to raise & lower the track voltage
- Use the Engine button & the TR button to jump between command & conventional control

*Only PS2 and conventional engines can be simultaneously operated.

two step INSTALLATION

DCS features two components, the DCS Remote Control & the Track Interface Unit (TIU). An additional component, the Accessory Interface Unit (AIU), can be added to give you control over accessories & switches. In addition, you will need an AC transformer.

3 OPTIONAL
Connect the AIU to the track

1 Connect *any* transformer to the TIU

2 Connect the TIU to the lock-on

DCS works by transmitting an electric "digital" signal along with the power from the transformer into your railroad's track. In order to get that signal to the track, you must plug your transformer into the TIU & then attach the TIU to the track. Special banana jacks make the wiring a snap. The DCS remote control "talks" to the TIU via a radio signal so there's nothing to hook up here except the installation of four AAA batteries.

DCS

TMCC

All these TMCC components are required to achieve similar features as those found in DCS.

UNMATCHED COMMAND CONTROL FEATURES

Operational Features

- 9 Independent Volume Control Settings
- 16 Adjustable Chuff Rate Settings
- 3 Adjustable Smoke Intensity Settings
- Adjustable Brake Sound Effects
- Adjustable Wheel "Clicky-Clack" Sounds
- 15 Programmable Custom Sounds
- 4 Adjustable Diesel Engine Ditch Lighting Effects
- 120 Adjustable Maximum Engine Speed Settings
- 3 Adjustable Locomotive Direction Start-up Engines
- Programmable Lash-up Creation
- Programmable Route Creation
- Programmable Scene Creation
- Record/Playback 90 Minutes of Operation
- Downloadable Locomotive Sounds Sets
- Independent Locomotive Chronometer
- Independent Locomotive Odometer
- Independent Locomotive Trip Odometer
- Independent Locomotive Battery Charge
- Track Signal Test
- Linear Track Length Meter
- Adjustable 50 or 60Hz AC Input
- 2 Independent Engine Reset Features
- 16 TIU Individual Channel Controls

Remote Control Features

- Built-in Microphone
- Back Lit 4-Line LCD Screen
- 5 Programmable Softkeys with Up to 36 Options
- Controls Between 4 & 20 Tracks
- Controls Between 20 & 500 Accessories
- Independent Whistle & Bell Sounds
- 120 Speed Steps
- On-Screen List of Up to 99 Engines
- 42 Levels of Programming Option
- Labor/Drift Chuffing Sound Control
- Diesel Rev Up/Down Sound Control
- Speed Boost & Brake Control
- One Touch Smoke On/Off Control
- One Touch Volume Level Control
- Engine Sounds Mute Button
- One Touch Headlight On/Off Control
- One Touch Proto-Cast™ Control
- One Touch Coupler Operation Control
- One Touch Engine Startup Control
- One Touch Engine Shutdown Control
- One Touch Passenger or Freight Sound Activation
- One Touch Doppler Sound Effect Operation
- Stores Up to 99 different Engines
- One Touch Emergency Stop Button
- Adjustable Acceleration/Deceleration Rates
- Built-in Programming Port for Future Software Upgrades

Proto-Sound® 2.0 Battery Charger

Easy-to-install kit provides the external battery charger port you need to recharge your locomotive without putting it on the track (requires the 50-1019 Proto-Sound Battery Charger). Some modification of locomotive required.

Locomotive Battery Charging Kit
Item No. 50-1021 Proto-Sound® \$9.95
Item No. 50-1022 Proto-Sound® 2.0 \$9.95

Includes
- Proto-Sound External Battery Charger Port
- 9v Battery Connector
- Proto-Sound Circuit Board Connector

EXPAND YOUR LAYOUT

Every model train layout needs a track system before anything can really happen. Choosing a track system doesn't have to be complicated if simplicity, good looks and a wide variety of choices are your criteria.

M.T.H. Electric Trains has developed two track systems: ScaleTrax™ and RealTrax® for O Gauge model railroaders. Both systems feature solid nickel-silver rails that won't rust or bend when stepped on. Both systems utilize a patented quick-connect connection system that doesn't require track pins or rail joiners. Most importantly, both systems are fully compatible with any manufacturer's O Gauge locomotives or rolling stock and each features a wide variety of components for virtually every possible track design.

If you're a scale modeler who wants a highly realistic looking track system, ScaleTrax just might be the choice for you. Featuring a lower track rail profile than other track systems and a nearly invisible center rail, ScaleTrax is the best choice to make your scale layout look incredibly realistic.

Traditional O Gaugers will find RealTrax a simple, easy-to-use solution perfect for permanent or temporary layouts. Thanks to its built-in roadbed, RealTrax makes a great solution for a carpet layout. Its snap together design makes setting up and taking down a temporary layout a breeze for railroaders of any age.

REALTRAX
BY M.T.H. ELECTRIC TRAINS

Flexible Enough To Set-up Virtually Anywhere, Even on Carpet

RealTrax Features:

- Solid, Rust-Proof Nickel Silver Track Rails
- Requires No Connecting Pins or Rail Joiners
- Authentic Molded Realistic Roadbed
- Assemble RealTrax in Minutes Without Any Special Tools
- Flexible Enough To Set-Up Virtually Anywhere, Even on Carpet
- Easy To Power, Plug-In Lighted Lockon Ports On Every Track Section
- Available In Different Lengths & Curves, Switches & Operating Track Sections For Easy Expandability
- Reliable Remote Controlled Operating Switches
- Mates With Other Track Systems
- Works With Any Manufacturers Trains

The basic O Gauge track curve is O-31, meaning those curves have a 31" diameter when assembled in a circle (this is the curve size in RailKing sets). For people with more space & larger engines, we offer a series of larger curve sizes, up to O-82, which is 82 inches in diameter.

Long engines & cars cannot make a tight curve (think of the way an 18-wheel truck has to swing out wide to make a sharp turn) & often require a large track curve.

Overhead Catenary Systems

Add An Exciting Overhead Catenary System!

The RealTrax Catenary System and RealTrax Catenary Expander are O Gauge's only ready-to-use catenary systems that setup in minutes! Simply position the authentic-looking catenary poles and wires per your layout's requirements, and enjoy the realism of a fully functional easy-to-use catenary system.

Features:

- Compatible with RealTrax or any other O-Gauge Track
- Removable RealTrax Lock-On Base Connection
- Thumbscrew Power Terminals
- Adjustable Pole Spacing
- Adjustable Messenger Beam Height
- Adjustable Wire Positioning
- Base Mounting Screws Included

Catenary Hardware Pack

Item No. 40-1039 \$19.95

Includes: 4 adjustable messenger expander plates and 4 messenger extension plates to help you custom-fit RailKing Catenary to your layout.

Bringing Hi-Railing Down to Earth

ScaleTrax by M.T.H. Electric Trains is the ultimate track layout solution for Hi-Railers and other detail-oriented 3-rail modelers who like to keep a permanent layout. No longer will an O Gauge model railroader have to accept the tubular track look, because ScaleTrax is the only 3-rail track system that utilizes realistic looking rails with a more scale sized profile.

Whether assembling your first layout or replacing your old track for a scale look, ScaleTrax is the most realistic and durable 3-rail O Gauge track system available today.

BUILD YOUR EMPIRE

Warning signs like our operating crossing gate (complete with ringing warning bell, flashing lights and crossing arm that lowers) and traffic lights keep the townspeople safe. Streetlights and hi-tension towers turn your layout into a real-looking, recognizable town.

M.T.H. offers a variety of RailTown™ buildings to help you create whatever kind of atmosphere you desire: rural or urban, nostalgic or modern. Operating buildings transfer your layout's action from trains to structures adding fun and excitement to the entire pike. RailTown buildings are a perfect addition on any O Gauge layout, as each is sized for use with all O Gauge locomotives and rolling stock.

Many RailKing operating accessories bring a layout to life via real-world movement and operation. In addition to lights and signals there are many operating buildings. An SUV pulling through a McDonald's® drive-thru after ordering, a coaling tower that lifts bucketfuls of coal and dumps them into a waiting hopper car, a fill-up at the local gas station, log operations at the saw mill and much more are awaiting owners of RailKing operating buildings. Each fully assembled and ready to use means your layout transformation into a world of action is just a few minutes away.

As you peruse the next few pages, you'll find that we've divided the accessory section into four categories: RailTown buildings, traditional accessories that feature the classic "Tinplate" look for the mid-20th century, miscellaneous accessories like bags of coal or smoke fluid, and O Scale accessories complete with scale proportioned, well-detailed models that make a layout incredibly realistic.

RailTown buildings have long been acclaimed for their ease of use, variety and scale details. Pre-assembled and painted, each is ready-to-use right out of the box.

Now, for those looking for a prototypical scale layout, M.T.H. is pleased to offer our all-new RailTown Signature Series buildings that are pre-weathered for an incredibly realistic appearance. Created in partnership with Scale Models, Arts & Technologies, Inc. (SMARTT), each building's distinctive paint scheme was originally designed and crafted by an artist who specializes in creating structures for SMARTT's custom layouts built for private and corporate clients nationwide.

Intricate details like brick mortar, weathered roof lines and sun bleached siding helps make RailTown Signature Series buildings look even more realistic, adding an incredible touch of realism to your model railroad.

Look for an exciting coupon offer from SMARTT in every MTH Signature Series building!

- Lighted Interior
- Operating Smoke
- Operating Fire Glow
- Operating Water Pump
- Includes Fireman Figure, Ladder and Hose

Add Action to Your Layout!

Squirts Real Water

House On Fire

Add some real excitement to your layout with this realistic all-new accessory. While the "fire" isn't real, the smoke and water are!!

Watch as the smoke pours out of the house. The fire glow from inside gives off the impression that the house is ablaze.

Fortunately, the fireman outside is on alert and is diligently washing down the house with his hose as real water streams out and down through the roof.

The water is self-contained inside the structure and recirculates through the fireman's hose. Everything comes painted and assembled. Installation is easy and quick.

Water recirculates through the fireman's hose.

House on Fire - Tan and Black

Measures: 7 1/2" x 7 1/2" x 7"

Operating Storage Tank and Station

When in operation, the attendant is lowered to the top of a waiting tank car (sold separately) where he puts the hose fittings on the dome. After a pause to fill the tank, he and the hose are lifted out of the way so the car can move on.

Can be operated individually or paired with the Operating Storage Tank (sold separately) to make a full-service operating yard accessory.

Item No. 30-9122 \$89.95

Watch Spinning Blades "Cut" Logs into Boards

This working saw mill gives your trains something to haul. At the push of a button the blade spins and the log passes by. After each pass, a plank appears, as if cut from the log, and the arm lifts the plank and drops it into the waiting car you park beside the mill.

As a member of the M.T.H. Railroaders Club® you'll receive:

Limited-Edition Club Car

Each year we produce beautifully decorated cars exclusively for our Club members. Members automatically receive the car that matches their Club membership (RailKing®, Premier, Tinplate or One Gauge) & have the option to collect the other Club cars as well.

The CrossingGate®, Club Magazine

You will receive our full color Club magazine, jam-packed with product news, layout tours, ideas from other members, rail history, & step-by-step articles explaining how M.T.H. technology can bring your railroad to life.

1st Class Mailing of M.T.H. Catalogs

Club members get the catalogs, filled with cool, limited-run engines & accessories, earlier than the rest of our mailing list, so they can order from their local train store before the best items are sold out.

Club Web Site

Visit www.mth-railking.com & type in your member number to gain access to the Club web site. Here you can exchange messages with other Club members, keep up with the latest news, & even build your own homepage.

RailWare Software CD-ROM

Use your computer to design track layouts, search the database of all M.T.H. products, look at our past catalogs, listen to ProtoSound® train effects, & much more. This CD retails for \$79.95, but is yours FREE as a Club member.

Special Club Merchandise

Club members can buy exclusive Club items or receive special discounts on select items. Currently, you can buy our Club-Exclusive Locomotives & order our 350-page, book of M.T.H. history, *A Toy Train Story*, for only \$25 with your membership. The book's cover price is \$49.95.

Club Card & Lapel Pin

Show the world your membership in this elite group of model railroaders with your high-quality embossed membership card & beautiful enamel lapel pin.

Proto-Sound® 2.0 Upgrade Kits

Club members can save an additional 15% on these kits by visiting the MTHRRC web page.

Carry on the M.T.H. tradition with memorabilia and collectibles

MTH Promotional Video

This video is packed full of sights & sounds guaranteed to make you rethink how far the hobby of model railroading has come. You'll learn about some of the most innovative products ever produced & marvel at the sophistication of a product line unmatched by other model train manufacturers.

Previous Year Club Cars

MTHRRC members can still obtain earlier produced MTHRRC cars by visiting the MTHRRC pages on the website. Only MTHRRC members can get these cars!

A Toy Train Story

This comprehensive book is a must for collectors & other lovers of toy trains. 350 pages & 1900 color photos, hard cover. Add this book to your membership for only \$25.00 (50% off the \$49.95 cover price)!

RAILROADERS CLUB

M T H O - G A U G E M E G A S T A T I O N S

On-line & toll free access to the network of M.T.H. Authorized Retailers & "tools" on the M.T.H. website (www.mth-railking.com), such as the M.T.H. Product Locator, have helped many train enthusiasts locate nearby retailers, service centers or even a particular desired product for years.

Now, M.T.H.'s new on-line "Dealer Availability" finder allows customers interested in a newly-announced product to find a retailer with the item(s) on order.

In addition, M.T.H. is expanding these services with two ALL NEW programs that will provide consumers with access to retailers who provide a superior environment for showcasing & demonstrating M.T.H. products & cutting edge technology:

At M.T.H. Authorized DCS Demo Centers, you can now expect to see DCS & Proto-Sound® 2.0 equipped locomotives in action, find DCS in stock & learn more about this exciting command control system from experienced DCS staff members.

M.T.H. Authorized Mega Station Retailers are your best bet for finding the widest selection of M.T.H. products in stock when you want them. Like a DCS Demo Center, your local Mega Station retailer has DCS in stock & the know-how to get you up & running in no time.

Not all products depicted in this catalog are production models. In some cases, the items pictured may be HO, O Scale or some other scale product. All item's graphic features and content are subject to change after publication. All product features may be verified on their retail packages.

Service Information

Our Service Page is your direct link to the M.T.H. Tech Support Team. Register your warranty, find a local service center or submit a product specific question here. You can even place a parts order through our secured server. It's easy and quick like it should be when you're looking for answers.

Product Locator

The most popular section of the M.T.H. website can be found here. This is where visitors come looking to locate a particular product within the vast M.T.H. Authorized Retailer network. Developed in 1999, no other manufacturer has yet created a service like this for their customers. With over 7,000 items in the M.T.H. product line, this tool is your best bet for finding a hard-to-get M.T.H. item.

View a catalog

The latest products featured in each M.T.H. catalog can be seen here. This is a popular destination for customers waiting for a new catalog to arrive in the mail. Sign up for our free electronic newsletter & you'll be notified when a new catalog has been posted online. You'll have all the news and details before any of your friends.

Shipping Schedule

Keeping track of all those M.T.H. items would be an impossible task without our online shipping schedule. We update the schedule every week with the latest monthly releases. You can access this information directly or from the Product Locator section.

H O M E P A G E

A quick trip to the M.T.H. website will result in a wealth of information on M.T.H. products from a site that was designed to give the visitor easy access to all things M.T.H. Here you will find a complete list of M.T.H. products, an easy to use product / dealer locator, tons of news & information on M.T.H. You can even watch videos of M.T.H. products in action.
